Authorization verification remains with SSL.com

This extract supplies the third-party contact information requested by the upload prompt. It does not establish a named applicant's employment or authority, and it is not a signed authorization. SSL.com should independently validate the source and perform its required callback or other authorization check. The applicant should arrange for the company switchboard to route the validation call to the actual authorized contact.

The public contact belongs to the company. No personal name, title, applicant email, order number, extension, or signature has been inferred. An optional separate authorization template is provided for company completion only if needed.
